Claim Objections

1. Claim 19 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 19 has not been further treated on the merits.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 21 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 21 recites “a computer program containing instructions,” this recitation is functional descriptive material and does not fall into at least one of the four statutory classes defined by 35 U.S.C. 101. A computer program, such as the recited computer program containing instructions, only imparts functionality when employed as a computer component, such as when a computer program is recorded on a computer readable medium. If a claim covers material not found in any of those four categories, then the claim falls outside the plainly expressed scope of 35 U.S.C. 101, even if the subject matter is otherwise new and useful. *See In re Nuijten 84 USPQ2d 1495 (Fed. Cir. 2007)*

Allowable Subject Matter

3. Claims 1-18, 20, and 22 are allowed over the prior art. The following is an examiner's statement of reasons for allowance: the most relevant reference Guillou L.

C. et al. "Cryptographic Authentication Protocols for Smart Cards," discloses GQ2 asymmetric authentication based on integer factorization (See page 445 col. 2 through page 448 col. 2). The GQ2 asymmetric authentication has a modulus n used for an RSA signature with v , where v is determined by $v=2^k$ with $k \geq 2$. The GQ2 asymmetric authentication does not disclose using $v=2^{b+k}$ where k is a strictly positive integer and $b=\max(b_1, \dots, b_f)$, where b_j (where $j=1, \dots, f$) is the highest integer such that $(p_j-1)/2^{b_j-1}$ is even.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
